

Saratoga AssorbiUmido

Saratoga AssorbiUmido is a dehumidifying system that begins working when humidity level exceeds the standard values (between 40 and 60%). Thanks to its highly hygroscopic salts, it absorbs the exceeding moisture and transfers it, in the form of liquid, into the specific collection tray. It removes all the unpleasant effects caused by moisture, thus ensuring optimal environmental levels.

APPLICATION FIELDS

Saratoga AssorbiUmido can be placed everywhere: at home (wardrobes, pantries, bathrooms, kitchens, basements, cellars, garages, attics and bookstores), on boats, on caravans, on campers, in offices and labs.

APPLICATION

Once activated, Saratoga AssorbiUmido starts its long-lasting action (it can absorb one liter of water and it can last more than 30 days), which will end after all salts are completely melted. After emptying the drip pan from water, it is possible to restock the perforated loading tray with new salts up to complete level in order to keep a high efficiency of absorbency. Otherwise, once all salts are melted, the drip tray can be easily reused without any waste, thanks to the refill bags, Saratoga AssorbiUmido Ricarica.

Saratoga Assorbiumido:

- Remove the lid and the perforated loading tray from the collection tray and take out the bag of salts.
- Reset the self-placing perforated loading tray in the collection tray.
- Cut a corner of the salt bag and pour all the contents uniformly into the perforated loading tray.
- Close the lid and place the dehumidifier in the desired room.

Saratoga AssorbiUmido Ricarica:

- Remove the lid and the perforated loading tray from the main compartment of the dehumidifier.
- Pour the water contained in the collection tray into the toilet.
- Reset the self-placing perforated loading tray in the drip pan.
- Pour the refill bag's contents uniformly into the perforated loading tray.
- Close the lid and place the dehumidifier in the desired room.

Under certain environmental conditions, salt crystals can form a surface crust. In order to ensure the product is fully efficient, it is advisable to break the crystals' crust and move the salts, avoiding any direct contact with the skin. Do not leave the salt bag opened: contents should be used all at once.

SPECIFIC DATA

Raw material	Calcium chloride
Appearance	Crystal flakes
Color	White
Ideal performance	A 450g bag for each room

STORAGE AND SHELF LIFE

Keep in a cold and dry place in unopened original packaging.

CAUTIONS

Keep out of the reach of children.

Consult Material Safety Data Sheet for full list of hazards and the directions on the product label itself.
